

Table of contents

Preface	I
Summary	II
Sammendrag (Danish summary)	III
Abbreviations	IV
1. Introduction	1
2. Objectives	2
3. Obesity and obesity-associated diseases	5
3.1 Obesity – status, identification, assessment and management	5
Prevalence and cause of obesity and obesity-associated diseases.....	5
Definition and metabolic consequences of obesity	6
Weight loss	9
Prevention of weight gain.....	10
Can risk of metabolic syndrome be lowered without weight loss as a prerequisite?	11
3.2 Regulation of energy balance	12
Energy intake and appetite regulation.....	12
Energy expenditure	15
Alternative ways to affect energy balance	17
4. Nutrition – a strategy to prevent and treat obesity and obesity-associated diseases	19
4.1 Protein – prevention or treatment of obesity?	19
The basics about protein, recommendations and protein intake in Denmark	19
Protein intake during energy restriction.....	20
Protein intake during long-term energy restriction	21
Protein intake during weight maintenance after a weight loss.....	21
Protein level theory.....	25
Is the effect of all types of proteins equal?	26
Do all types of protein sustain their effect during a longer intake?	29
4.2 Non-digestible carbohydrates – effects on metabolic syndrome	30
The basics about fibre, recommendations and intake in Denmark	30
Fibre mechanisms in the gastrointestinal tract.....	32
Fibre intake and the relation to obesity and obesity-associated diseases	35

4.3	Fat – effects on metabolic syndrome.....	37
	The basics about fat, recommendations and fat intake in Denmark.....	37
	PUFA intake, metabolic markers and metabolic diseases	38
4.4	Calcium - prevention of obesity?	39
	The basics about calcium, recommendations and calcium intake in Denmark.....	39
	Calcium effects related to obesity and metabolic syndrome - observational studies	39
	The mechanistic effects of calcium	40
	Calcium absorption and its interaction with other nutrients	42
	Is calcium important for weight maintenance and prevention of the metabolic syndrome?	44
5.	Gut microbiota modulation - a new strategy?	49
5.1	The bacterial fermentation of diet	50
	Carbohydrate fermentation and its influence on gut health	50
	Fermentation of AXOS.....	53
	Protein fermentation	54
5.2	Microbiota, obesity and obesity-associated diseases.....	54
	“The obese microbiome”	54
	The microbiome and obesity-associated diseases.....	56
5.3	Dietary modulation of the gut microbiota	59
	Probiotics.....	59
	Prebiotics	60
	AXOS influence on the gut microbiota composition.....	60
	Fat and PUFA influence on gut microbiota composition.....	66
	Protein intake and gut microbiota composition	69
	Calcium intake and gut microbiota composition	70
6.	Conclusion	72
7.	Future perspectives	74
8.	References	75
9.	Acknowledgements	88
	Papers.....	89
