

List of contents

Motivation of the subject area	1
1 Background	2
1.1 Vitamin D sources and metabolism	2
1.1.1 Sources of vitamin D	2
1.1.2 Metabolism of vitamin D in the human body	6
1.1.3 Effect of vitamin D intake on vitamin D status in children	6
1.2 Vitamin D assessment and status in Danish children	8
1.2.1 Assessment of vitamin D concentrations	8
1.2.2 Recommended vitamin D concentrations in children	8
1.2.3 Population groups at risk of low vitamin D status	9
1.2.4 Vitamin D status in Danish children	9
1.3 The role of vitamin D in the human body	12
1.3.1 Vitamin D and bone health in children	12
1.3.2 Vitamin D and cardio-metabolic markers in children	13
2 Research questions	15
3 Overview of the experimental work	16
3.1 The OPUS School Meal Study	16
4 Results	19
4.1 Paper 1	19
4.2 Paper 2	49
4.3 Paper 3	73
5 Discussion	95
5.1 Are vitamin D levels in Danish children sufficient during autumn?	95
5.1.1 Generalizability	95
5.2 Which factors are associated with vitamin D status in Danish children?	97
5.3 Is there an effect on children's vitamin D status of serving nutritionally balanced school meals for three months?	101
5.4 Is vitamin D status associated with cardio-metabolic markers in Danish school children?	103
5.5 Strengths and limitations of the PhD project	104
6 Conclusion	106

7 Perspectives	107
8 Acknowledgements	108
9 References	109
10 Appendix A	117
Study design paper - Design of the OPUS School Meal Study
